ABSTRACT

~~Summary~~

A self-locking belt roller retainer with a vehicle-sensitive and/or seatbelt-sensitive actuatable ~~blocking~~ locking device for the belt spool shaft, with a profile head as carrier of a ~~blocking~~ locking element arranged so as to be movable with the retractor housing for ~~blocking~~ locking of the belt spool shaft, ~~and with a~~ A force limiting device in the form of a torsion bar is connected at its one end ~~in torque-proof manner~~ with the belt spool shaft and at its other end ~~in torque-proof manner~~ with the profile head ~~is characterised in that at~~ At least one axially projecting projection (14) is provided on the one of the components which are joined to one another (10,11), which engages in at least one recess formed on the front side of the other component (10,11) and that in the annular space formed between the projection (14) and the inner walls (21) of the recess (20), a clamping ring (16,17,18) is located between projection (14) and inner walls (21) of recess (20).
